

CMS Star Ratings Performance & Quality Improvement Dashboard

Business Problem:

Healthcare leadership lacked a centralized dashboard to monitor CMS Star Ratings measure performance across the organization. Teams had limited visibility into individual measure scores, making it difficult to identify underperforming measures, understand where quality gaps existed, and prioritize improvement efforts that could positively impact the overall Star Rating.

Business Solution:

Developed an interactive CMS Star Ratings performance dashboard that consolidated measure-level data into a centralized view. The dashboard provided visibility into current scores, performance by measure, and areas below target, enabling leadership and quality teams to quickly identify low-performing measures, prioritize improvement opportunities, and monitor progress over time.
